

2007 ESRI Summer Internship Program

Are you looking for a unique way to spend your summer—an experience that will allow you to learn and earn at the same time? Get a head start on your career by spending your summer as an ESRI intern.

Students interested in careers in the software industry and geographic information system (GIS) technologies are invited to apply to the 2007 ESRI Summer Internship Program. Internships are available at ESRI headquarters in Redlands, California, and in our 10 regional offices throughout the United States. The program is open to both undergraduate and graduate students.

What We're Looking For

Many of our interns major in computer science, GIS, geography, or engineering, but we also have opportunities for marketing, business, law, and accounting majors. The most successful interns will have a strong desire to produce quality work and achieve great results. We seek students who excel at working on individual projects as well as collaborating in a team environment. We're looking for the best and the brightest!

What You Will Gain

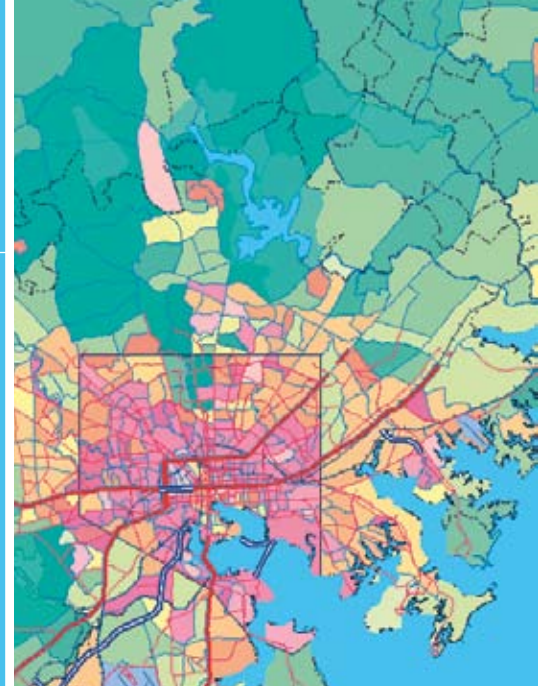

Pay is just one of the benefits of being an ESRI intern. Participants gain valuable work experience while they continue their education or prepare for life after graduation. An ESRI internship is an opportunity to work on challenging projects and learn from top-notch staff throughout the company. Interns also gain personal and professional skills that give them an edge in the workplace after graduation.

How to Apply

To be considered for an internship, students must create a candidate profile and apply online. A cover letter, copy of their resumé, and one letter of endorsement and evaluation must be attached. Specific details on the application process are available at www.esri.com/careers.

Internships are approximately 12 weeks in length. Relocation, housing, and all living expenses are the responsibility of the intern. Students outside the United States are welcome to apply but must obtain a visa on their own to work for the summer. Students from other countries studying at U.S. universities must see their university's international advisor to obtain a valid working visa.

Don't think of an ESRI internship as just another summer job. Take advantage of this unique opportunity to get a head start on your career!

"I am learning a lot about the tools and specialized techniques that can be applied to get more information or do analysis. This experience has given me the opportunity to improve my programming skills and learn to develop programs that I previously didn't think I could do. It has been a rewarding experience."

—2006 Product Development Intern

Applications must be received by **March 2, 2007**.

Selected students will be notified by **April 20, 2007**.
